Work History

06/2017 – 08/2017	<p>Outloud Timestation - Outloud Timestation is an enterprise web application that can help monitor and keep track of employee's performance in your business or organization. The interesting thing about this app is that it is very accurate and can also work in different locations. I have made this project with one team member.</p> <p>Live website link will be provided on demand.</p>
09/2017 – 11/2017	<p>Trade Anon - It's a bidding platform for dealers as well as members. It includes the following features including Member car posting, Dealerbidding on that post, Dealer cost estimation, Live Chat (Real time), LiveNotifications (Real time), Both receive emails against specific actions. I have made this project with one team member.</p> <p>Live website link will be provided on demand.</p>
01/2018 – 03/2018	<p>Reports Smasher - A complete system with admin panel for teachers to generate reports by adding the different templates and comments. They can edit, delete or add new reports. To use this system, the users have to pay</p>

money and that is done by PayPal Subscription method. I have made this project with one team member.

Live website link will be provided on demand.

06/2018 – 07/2018

Simple Job Portal - A simple job portal with beautiful responsive design where candidates can find the best job according to their skill set and can give review about job they applied for. I have made this project alone.

Live website link will be provided on demand.

07/2018 – 08/2018

Find Tutor - The website is for coaches to post students that they don't have time to teach so other coaches can apply for it. There are two main functions posting and applying. I've made this project with one team member.

Live website link will be provided on demand.

09/2018 – 10/2018

Online Quiz System - Online Quiz Platform which includes three panels including admin, student and teacher. I have made this project with one team member. And the project is not live yet.

11/2018 – 01/2019

Campus Management System - It is an online campus management system which includes three main modules teacher, admin and teacher. This system holds the record of whole campus and make it easy for campus to manage attendance, marks and record of students. I have made this project with 3 team members.

Live website link will be provided on demand.

01/2019 – 02/2019

Fabulous FX Style - This is an online academy system. Admin can add courses, course videos, can give links of online video conferences as well. Anybody can signup as a company to earn money from this platform by sending affiliate link to others. Students could view courses if they'll pay for any course. I have made this project alone.

Live website link will be provided on demand.

07/2018 – 05/2019

Enterprise Job Portal - This is my final year project. This is platform where companies can post jobs, can view profile of applied candidates, can send evaluation forms to applied candidates, can shortlist candidates, can take their interview by video calling or by messaging feature. Admin could send

promotion emails to every user, could also edit / delete / add jobs, candidates and employees. I have made this project with four team members.
Live website link will be provided on demand.

Portfolio - Live website link will be provided on demand.
